

KOI CARE
Pond Booster
All-in-one Nitrate/Ammonia/Phosphate remover.

All-in-one Nitrate/Ammonia/Phosphate remover - helps control waste, improves clarity, prevents blanket weed and generally helps to stimulate the vitality of fish.

Also provides extra surface for filter bacteria to grow on.

This is a powerful, zeolite based, medium which, because of the ideal particle size, has a very high capacity to remove ammonia and phosphate and prevent the formation of nitrate.

Sprinkle granules over the surface of the pond or add to filter in a fine net and add every 8 weeks during summer months.

Dosage:

Add 50 ml to 75 gallons (333 litres) of pond water every 8 weeks during the season.

Pack size	Treats
