Reduces risk of disease

Recommended flow: Input at least 700 gallons per hour - the output will be less than 700 gph.
We recommend that you direct the water to return into the first chamber of your filter.
If your pump is rated at more than 700 gallons per hour, use a diverter to run the excess back into the pond.

Suitable Pumps:
Blagdon Amphibious 3500
Meissner
or - any pump capable of handling back-pressure.
0.3 bar or 3 metre head of water.
Oase Aquamax pumps are not suitable.
